A. Text classification - the model learns to assign labels/categories based on patterns and features in the text in the email.

B. Question answering - the model could answer questions based on the essay provided, it could mean that it is much faster to check if the essay met all the requirements aka if it discussed or the topic it is supposed to be about and if it provides the right answers.

C. Question Answering - the system recognizes patterns in the input data and generates possible diagnoses based on answers to questions about symptoms and other relevant information.
